## Template included elements

- basic page tree including example content elements
- Typoscript Template and TSConfig (RTE, ..)
- all HTML/JS/CSS Files and Libraries
- HTML preview file
- Exported t3d file, to import a fully working site

## Install

You should already have a running TYPO3 System on Version 4.5, some older should work too but not tested yet. The archive contains all necessary files and a simple site structure to get a working page tree out of the box.

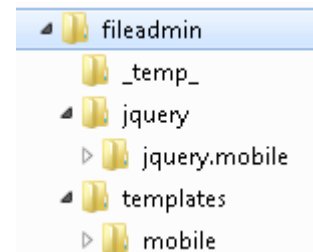

1. [Extract the downloaded archiv](#) file to *fileadmin* folder of your running TYPO3 system
2. [Import the t3x](#) file to get a running page structure
3. [Edit Template Constants](#) to match your environment
4. Replace example content and [create own one](#)

### ***Extract delivered archive***

All files must put in the fileadmin of your TYPO3 Installation. The *Templates* folder contains all HTML and CSS files.

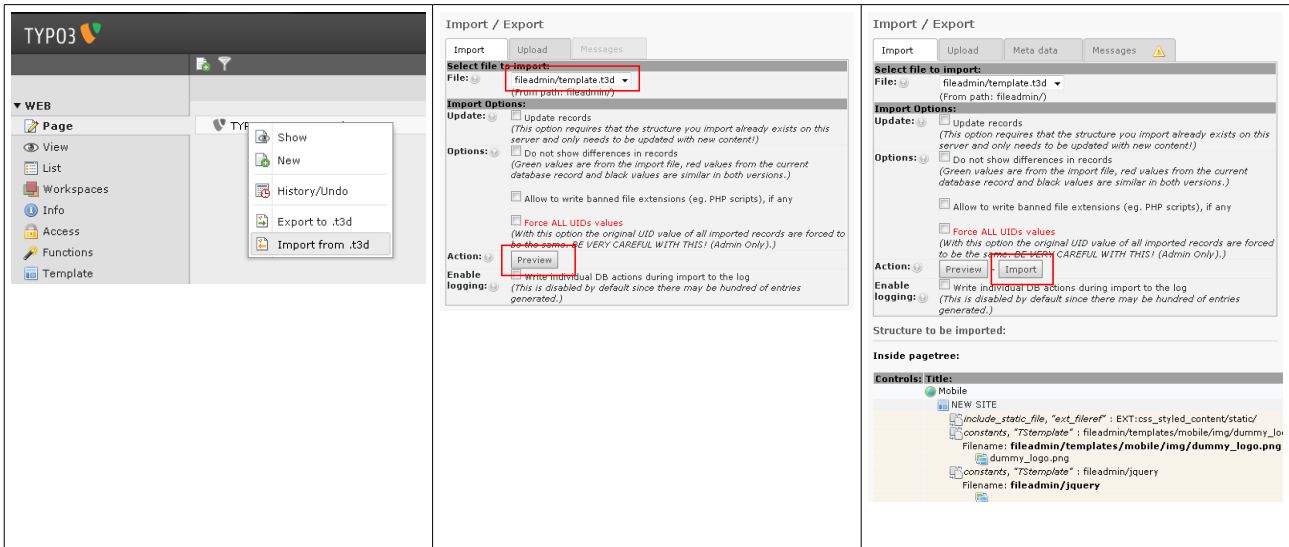

The *jquery* folder contains all jQuery and Libraries.

In the root folder you found a t3d file give you a simple page structure

### ***Import t3d file***

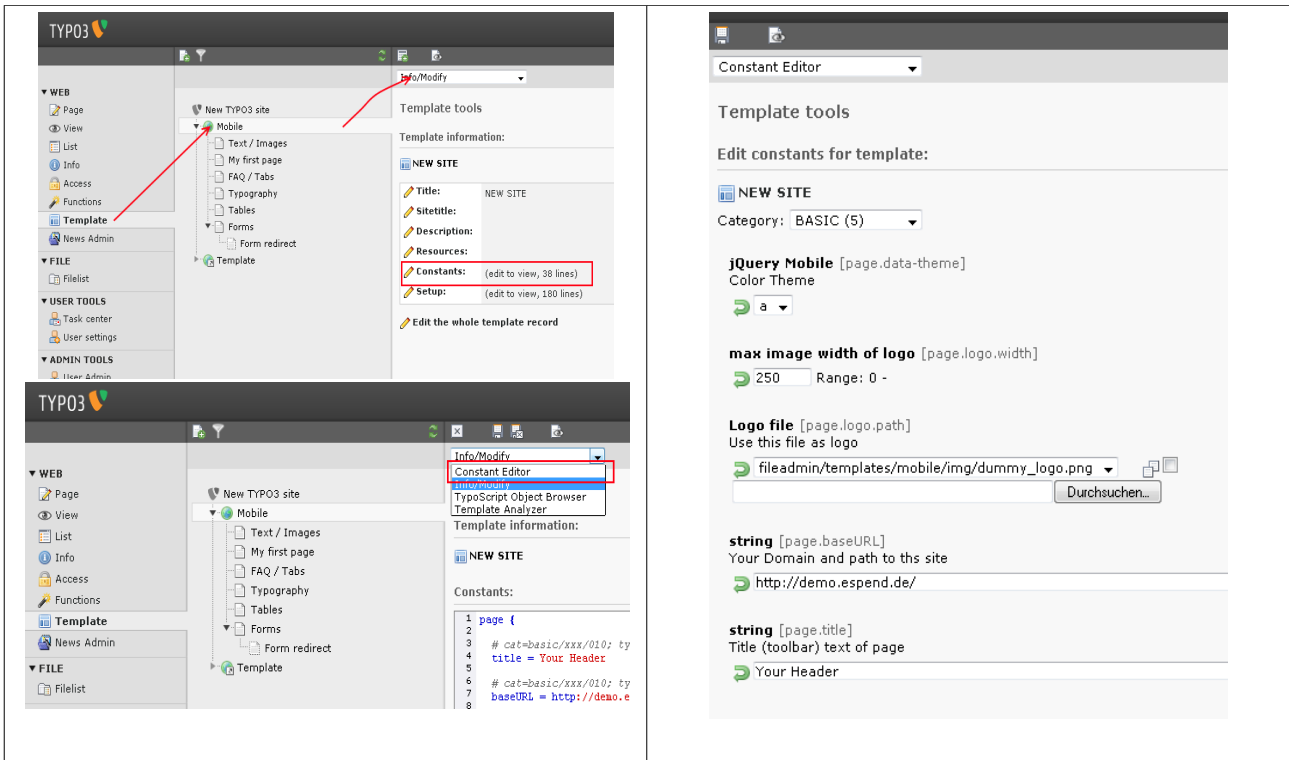

To starting working with this template you only need to import the t3d file. It provides a complete page tree and example content.

## Page Configs

TYPO3 contains a "Content Editor" to edit some page config like Logo and jQuery Mobile Theme. You can find all available parameter in the *Template* of the Rootpage. Follow following steps to open the "Content Editor".

**You should change the BaseURL, so the system knows your site url!**

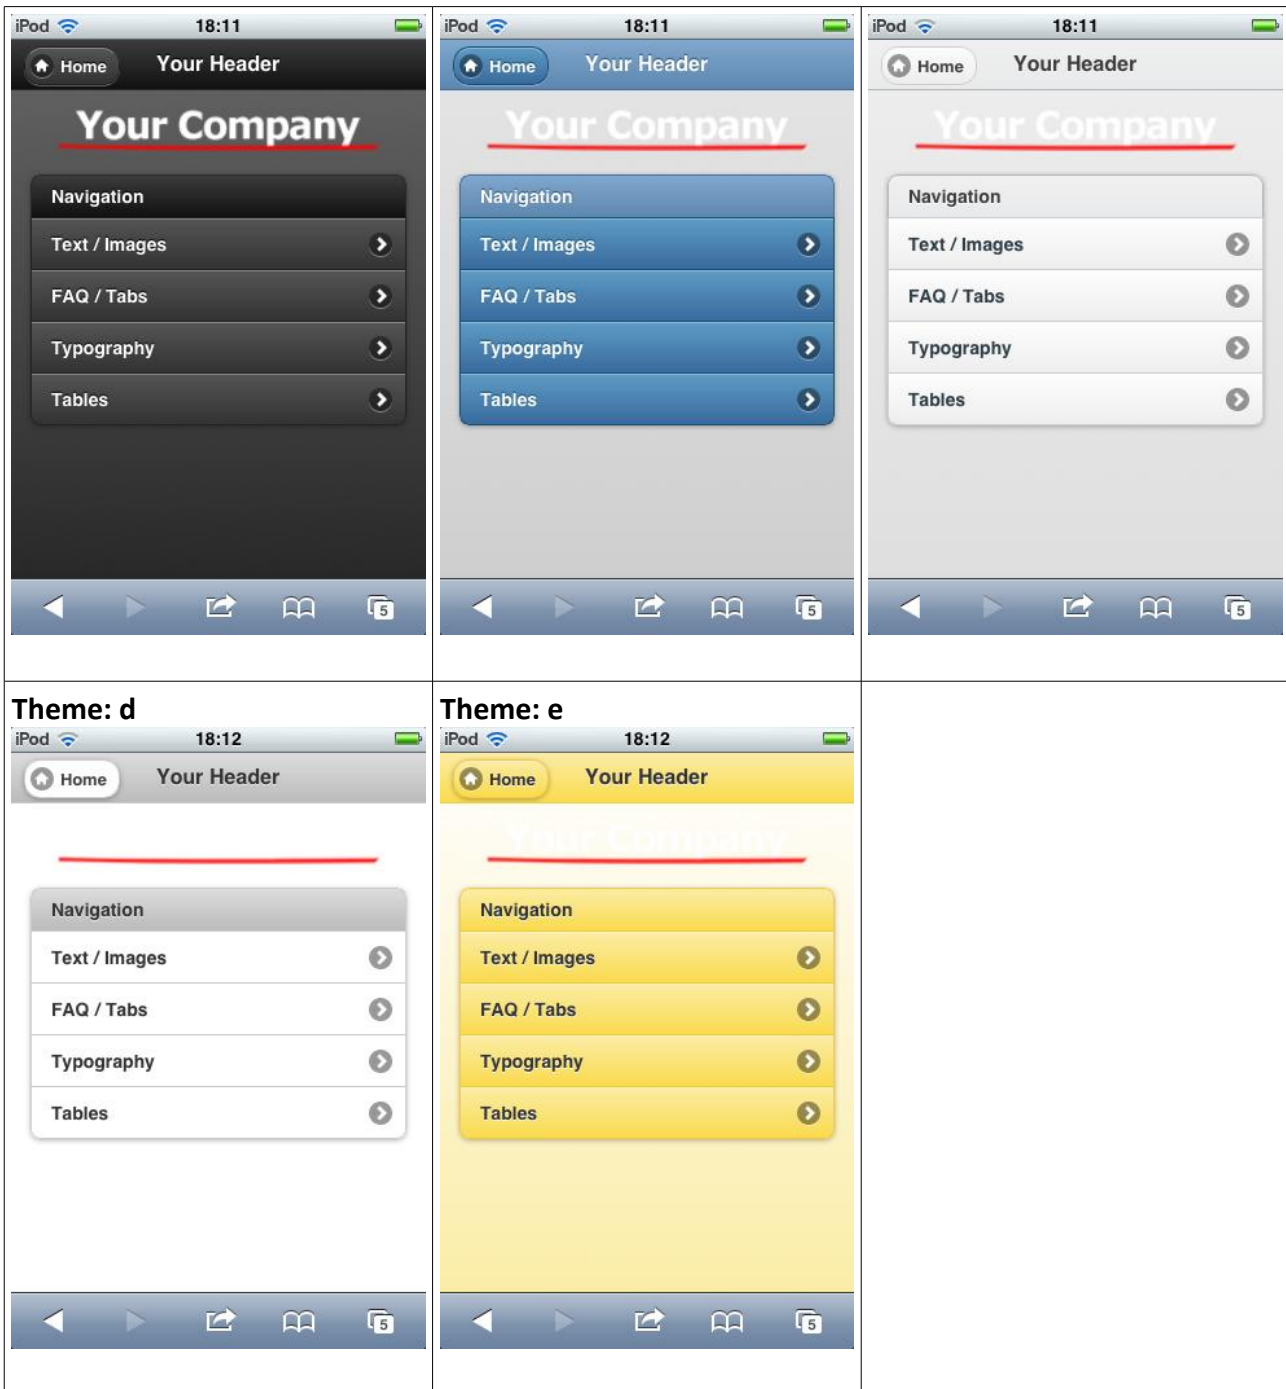

## ***jQuery Mobile Themes***

All possible jQuery Mobile Themes can be selected on a simple selectbox. After editing this value, think of clearing the TYP03 cache to see any change.

### ***Themes***

|                 |                 |                 |
|-----------------|-----------------|-----------------|
| <b>Theme: a</b> | <b>Theme: b</b> | <b>Theme: c</b> |
|-----------------|-----------------|-----------------|

## Other Configs

- Logo image and width can set by simply edit the values and upload an image
- Set the http url of you page
- Define the title of page

## Content Layouts

Every content element on TYPO3 can have a different Layout. This template adds some *Layout* styles to this elements.

## Tables

### Implemented Functions:

- You can select Layout: *default*, *Layout 1*, *Layout 2*
- “*Use Table Footer*” to set last table row as footer
- “*Table Header Position*” set where table headers row should be displayed

### Edit Page Content "Layout 2: Header/Footer" on page "Tables"

The screenshot shows the configuration interface for a table. It includes tabs for 'General', 'Table', and 'Access'. The 'Table' tab is active. A 'Layout' dropdown menu is open, showing options: 'Layout 2', 'Default', 'Layout 1', 'Layout 2', and 'Layout 3'. Below this are fields for 'Border:', 'Cellspacing:', and 'Cellpadding:'. The 'Columns' dropdown is set to 'Auto'. The 'Text:' field contains a table with columns 'Price|Features|All' and several rows of placeholder text. The 'Plugin Options' section includes 'Accessibility' and 'CSV parsing' tabs. Below these are fields for 'Table Caption', 'Table Summary', and 'Table Summary'. A checkbox for 'Use Table Footer (wrap last row with <tfoot> tags)' is checked. A dropdown for 'Table Header Position' is set to 'Top'. There are also checkboxes for 'No CSS styles for this table' and a field for 'Additional CSS Class'.

## Header Layout

You can define how table headers should be displayed.

| Table Header Position = „None“ | <p>Table Layout: default Header/Footer<br/>Your Table Caption: Our nice pricing table</p> <table border="1"> <thead> <tr> <th>Price</th> <th>Features</th> <th>All</th> </tr> </thead> <tbody> <tr> <td></td> <td>Lorem ipsum dolor sit amet,</td> <td>Duis et metus arcu.</td> </tr> </tbody> </table>   | Price  | Features   | All      |                | Lorem ipsum dolor sit amet,   | Duis et metus arcu.  |  |                             |                     |
|--------------------------------|---|--|------------|----------|----------------|---|--|--|-----------------------------|---------------------|
| Price                          | Features  | All  |            |          |                |   |  |  |                             |                     |
|                                | Lorem ipsum dolor sit amet,   | Duis et metus arcu.  |            |          |                |   |  |  |                             |                     |
| Table Header Position = „Left“ | <p>Table Layout: 1 Header Left</p> <table border="1"> <thead> <tr> <th>Price</th> <td>13.000 EUR</td> </tr> </thead> <tbody> <tr> <th>Features</th> <td>Lorem ipsum do</td> </tr> <tr> <th>More Text</th> <td>Lorem ipsum do</td> </tr> </tbody> </table>   | Price  | 13.000 EUR | Features | Lorem ipsum do | More Text   | Lorem ipsum do   |  |                             |                     |
| Price                          | 13.000 EUR  |  |            |          |                |   |  |  |                             |                     |
| Features                       | Lorem ipsum do  |  |            |          |                |   |  |  |                             |                     |
| More Text                      | Lorem ipsum do  |  |            |          |                |   |  |  |                             |                     |
| Table Header Position = „Top“  | <p>Table Layout: 1 Header/Footer<br/>Your Table Caption: Our nice pricing table</p> <table border="1"> <thead> <tr> <th>Price</th> <th>Features</th> <th>All</th> </tr> </thead> <tbody> <tr> <td>10 €</td> <td>Lorem ipsum dolor sit amet, consectetur adipiscing elit. All colors a set by CSS rgba() and semi-transparency, so it should work on every jQuery Mobile

theme

## Toggle-Box

Most content elements can be wrap into a toggle box which can be toggled on touch to open and close it.

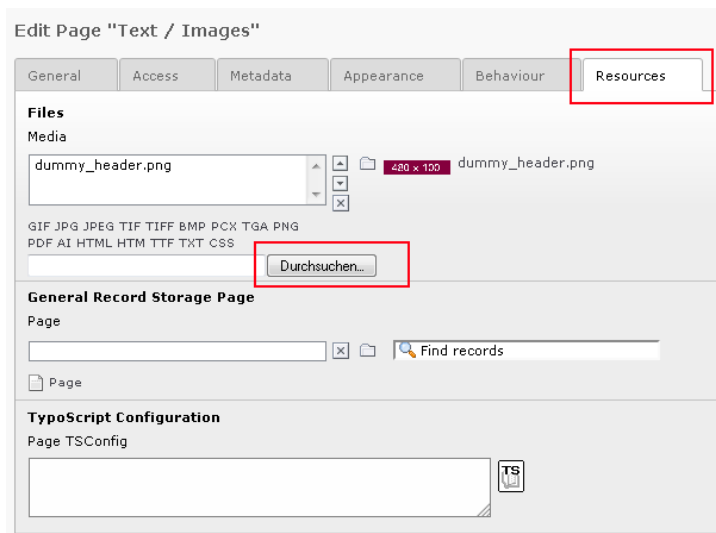

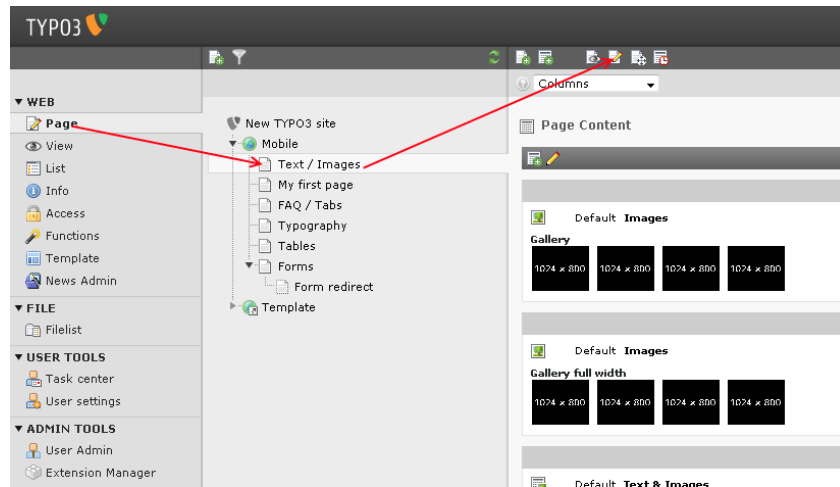

|   |  |
|---|--|
| <p>Indentation and Frames = „ToggleBox Closed“</p> <p>Indentation and Frames = „ToggleBox Open“</p> |  |
|---|--|

## Header

You can define a header image on each page or leave it blank if not necessary. The uploaded image is automatically scaled down to a friendly mobile resolution. The first image of the *Page Resources Media* field is used.

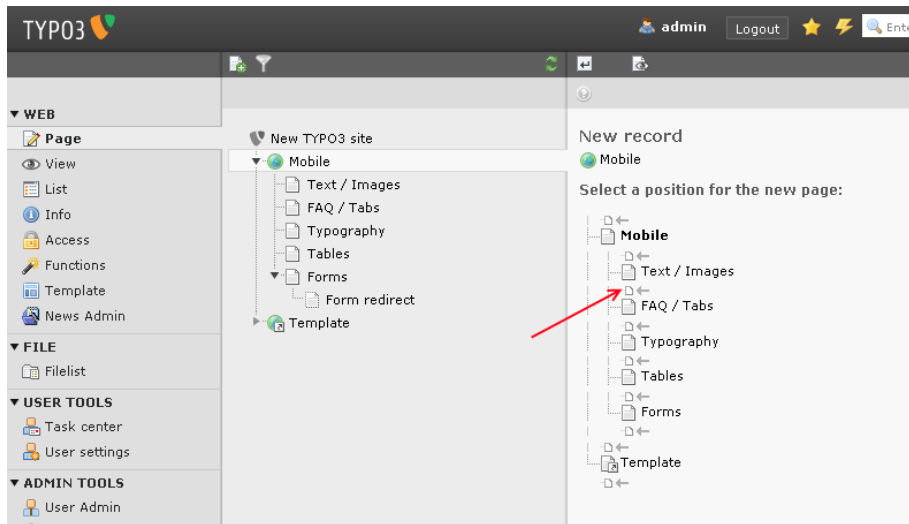

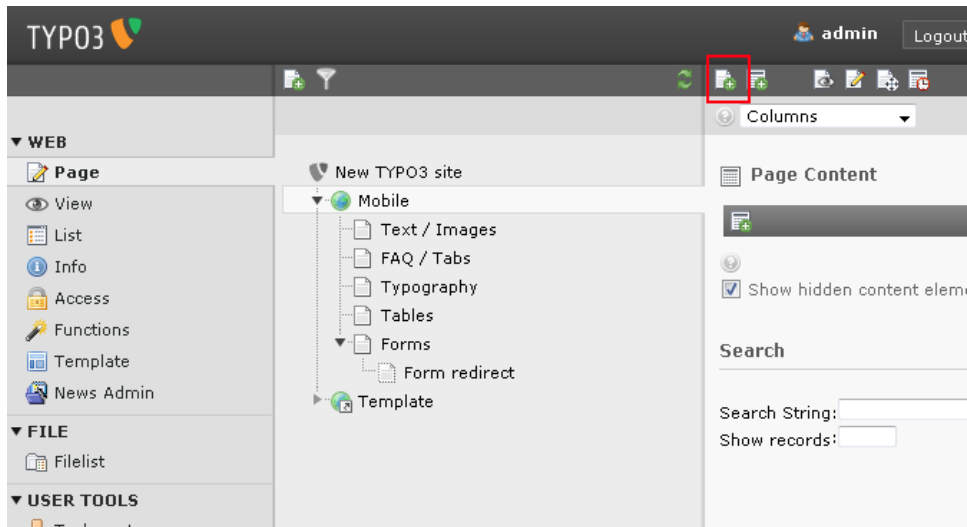

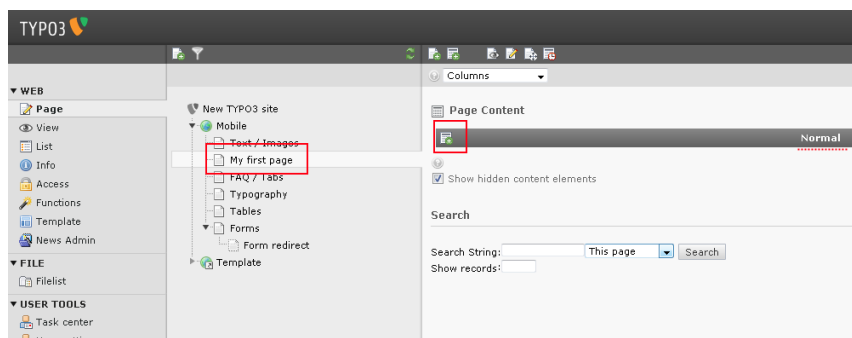

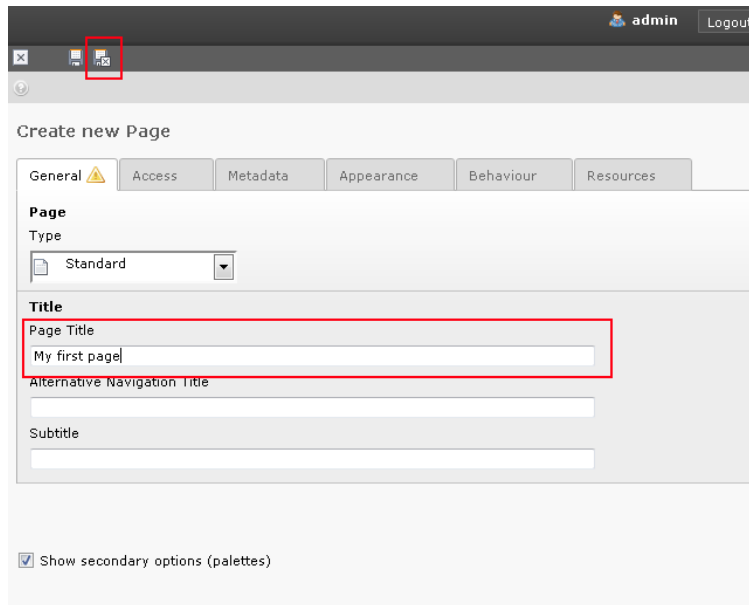

## Add stuff

### *Create a new page*

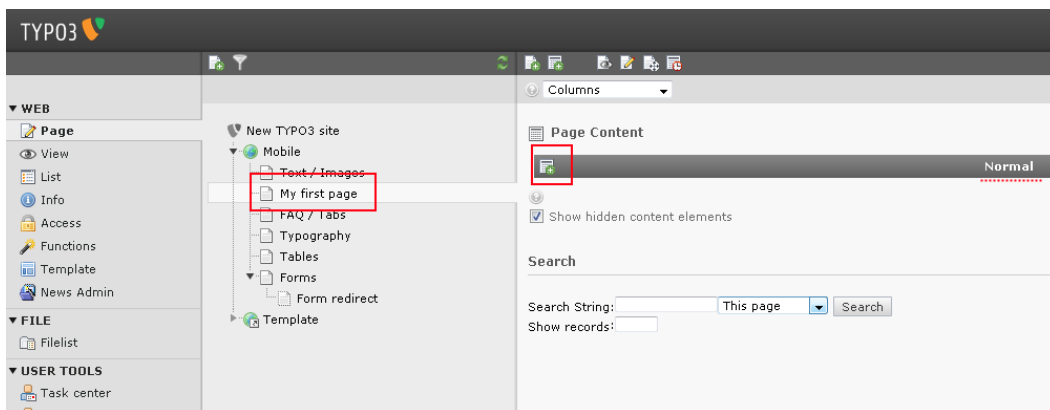

To create an new page in the menu and create content on this page flow these step first

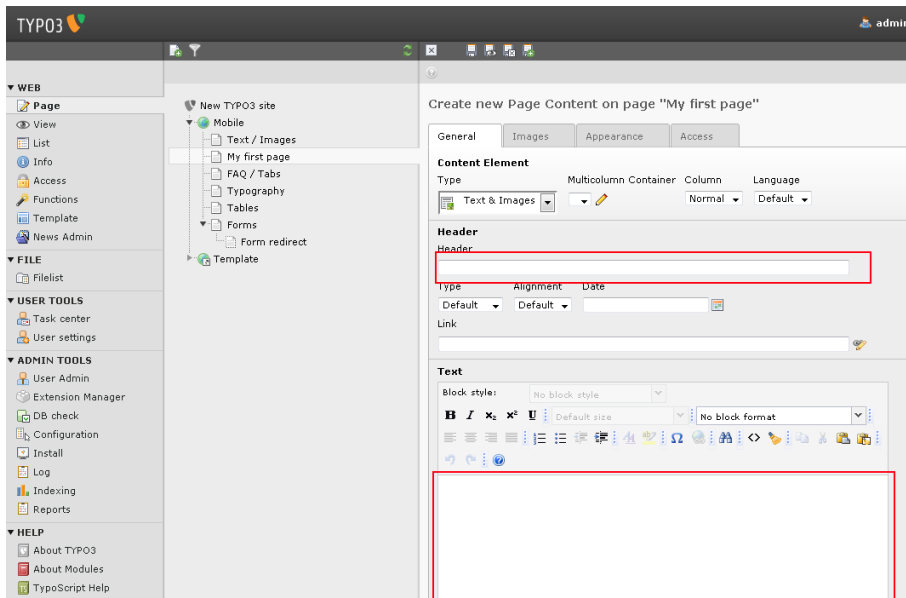

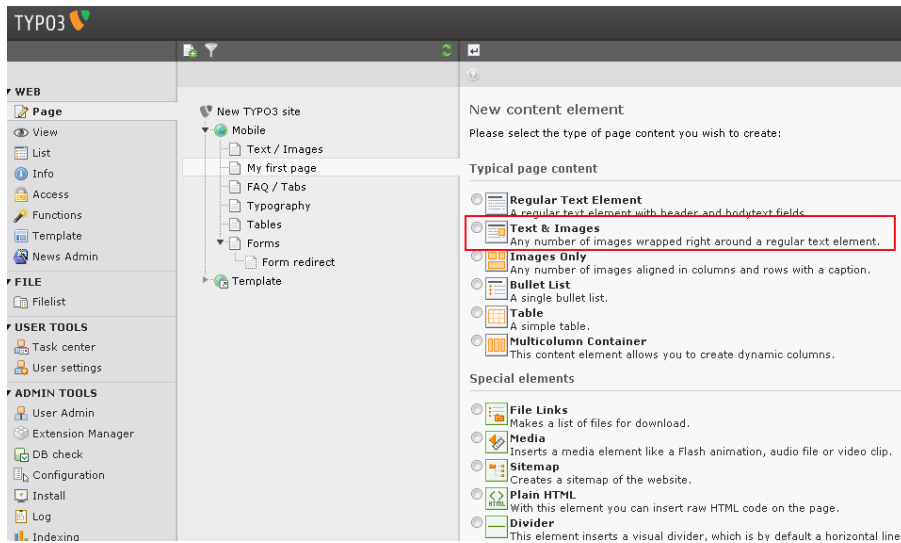

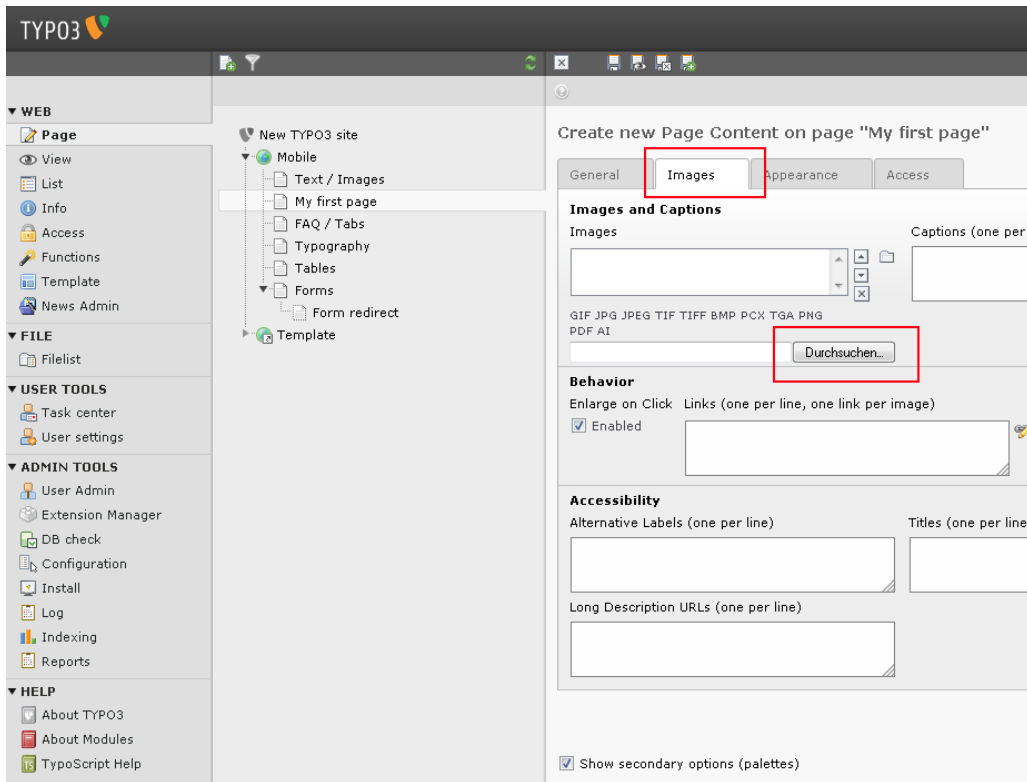

### Add new content to page

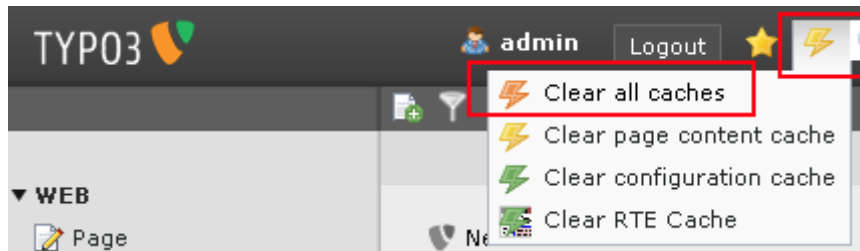

To add a new content to page follow this steps. *(Keep mind that every page can have multiple elements)*

Some content elements provide additional tabs on which you can attach images to content. You can also set how they should be displayed (right, center, intext, below, ...). These options can be found on the *Appearance* tab.

Finally *Clear the Cache* on TYPO3 if you do not see any change on the page.

## Additional Information

### *Homescreen Icon and loading page*

The template includes a **apple-touch-icon** file in which you can set an icon which will be shown on the Homescreen of iPhone, if the user adds a „Shoutcut“ on this device Homescreen. If the user loads your page from the Homebutton it looks like a really app, without the Safari browser bars. Also an icon (**apple-touch-icon-load**) will appear until the website is fully loaded. Some example Icons are include in this template including a simple **Photoshop** file.
